

Assignment 2:

Create MFA for authentication

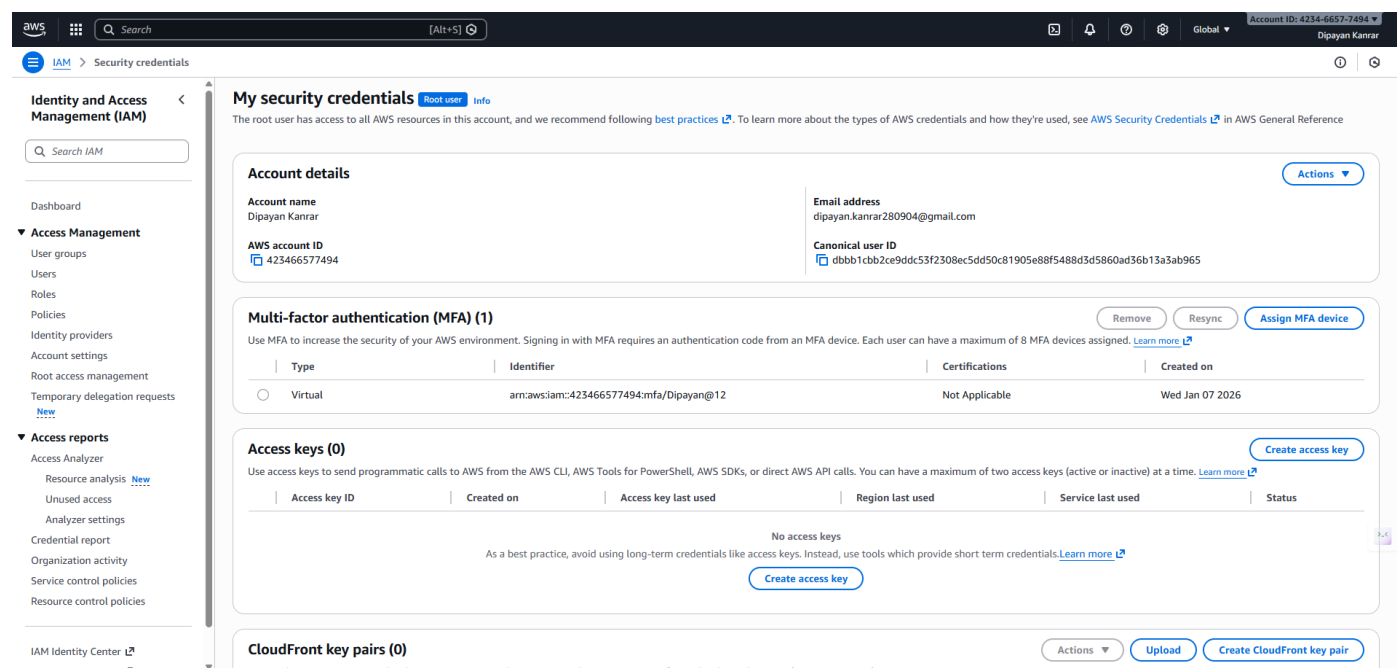

Step 1:

Sign in to the aws console account and choose the **security credentials**

Step 2:

Now **My security credentials** page will open and choose the security credentials from the right-side panel

Step 3:

Now select Assign MFA Device option, you will get options of select mfa device.

The screenshot shows the AWS IAM console interface for the 'Assign MFA device' task. The breadcrumb trail is 'IAM > Security credentials > Assign MFA device'. The left sidebar shows a progress indicator with 'Step 1: Select MFA device' selected and 'Step 2: Set up device' as the next step. The main content area is titled 'Select MFA device' and includes an 'info' link. It contains two sections: 'MFA device name' and 'MFA device'. The 'MFA device name' section has a text input field labeled 'Device name' with a placeholder 'Device name' and a note: 'This name will be used within the identifying ARN for this device. Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, and +, =, ., @, _ (hyphen)'. The 'MFA device' section is titled 'Device options' and states: 'In addition to username and password, you will use this device to authenticate into your account.' It lists three options: 'Passkey or security key' (selected with a blue radio button), 'Authenticator app' (unselected), and 'Hardware TOTP token' (unselected). Each option has an icon and a brief description. At the bottom of the 'MFA device' section is a label 'Passkey display name - Optional'.

Step 4:

Choose the **authenticator app** option and download the google authenticator application on smartphone or tablet

The screenshot shows the AWS IAM console interface for the 'Assign MFA device' task, now at 'Step 2: Set up device'. The breadcrumb trail remains 'IAM > Security credentials > Assign MFA device'. The left sidebar shows 'Step 1: Select MFA device' as the previous step and 'Step 2: Set up device' as the current step. The main content area is titled 'MFA device' and includes an 'info' link. It contains the same 'MFA device name' section as in Step 1. The 'MFA device' section is titled 'Device options' and states: 'In addition to username and password, you will use this device to authenticate into your account.' It lists three options: 'Passkey or security key' (unselected), 'Authenticator app' (selected with a blue radio button), and 'Hardware TOTP token' (unselected). Each option has an icon and a brief description. At the bottom of the 'MFA device' section are 'Cancel' and 'Next' buttons.

Step 5:

Set a device name and now scan the QR by the authenticator app from our mobile which we have installed earlier

Step 1 Select MFA device

Step 2 Set up device

Set up device info

Authenticator app
A virtual MFA device is an application running on your device that you can configure by scanning a QR code.

- 1 Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.
[See a list of compatible applications](#)
- 2 
Open your authenticator app, choose **Show QR code** on this page, then use the app to scan the code. Alternatively, you can type a secret key: [Show secret key](#)
- 3 Type two consecutive MFA codes below
Enter a code from your virtual app below
MFA Code 1
Wait 30 seconds, and enter a second code entry.
MFA Code 2

[Cancel](#) [Previous](#) [Add MFA](#)

Step 6

Type the two consecutive MFA code from the authenticator and lastly choose the add mfa button follow.

Step 1 Select MFA device

Step 2 Set up device
