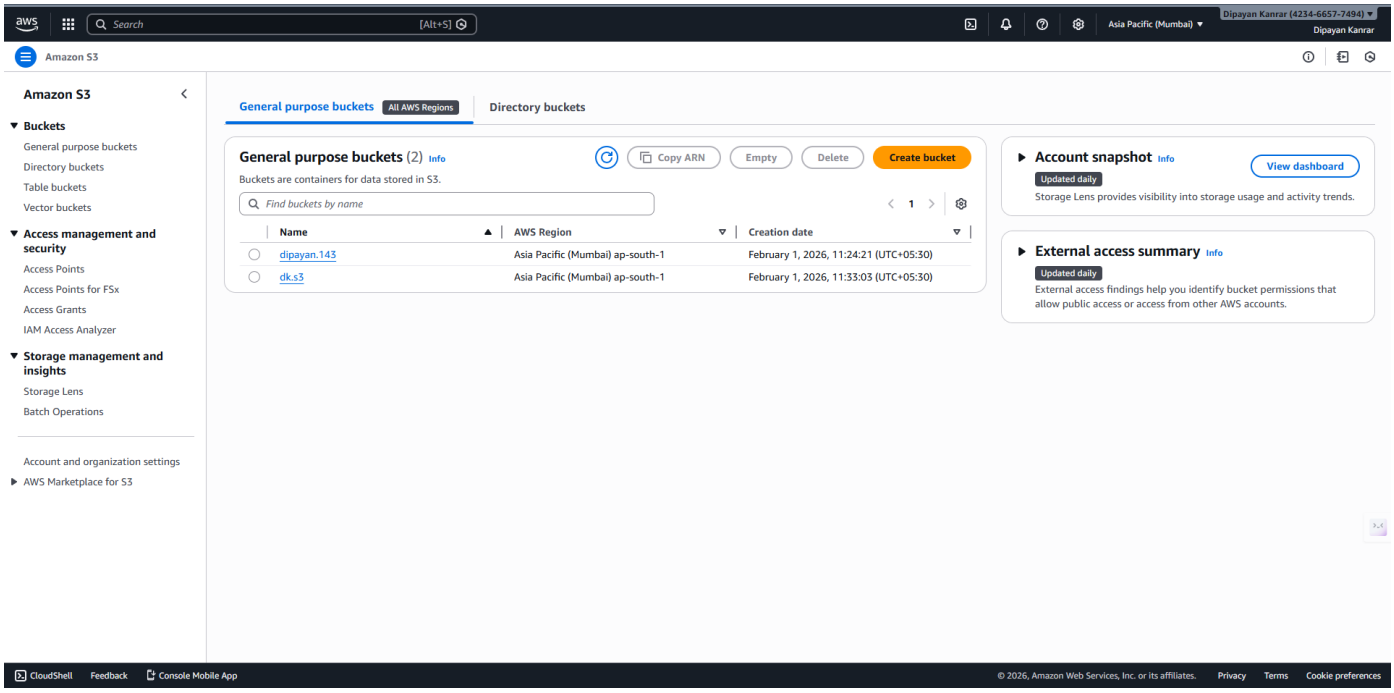
Assignment 6

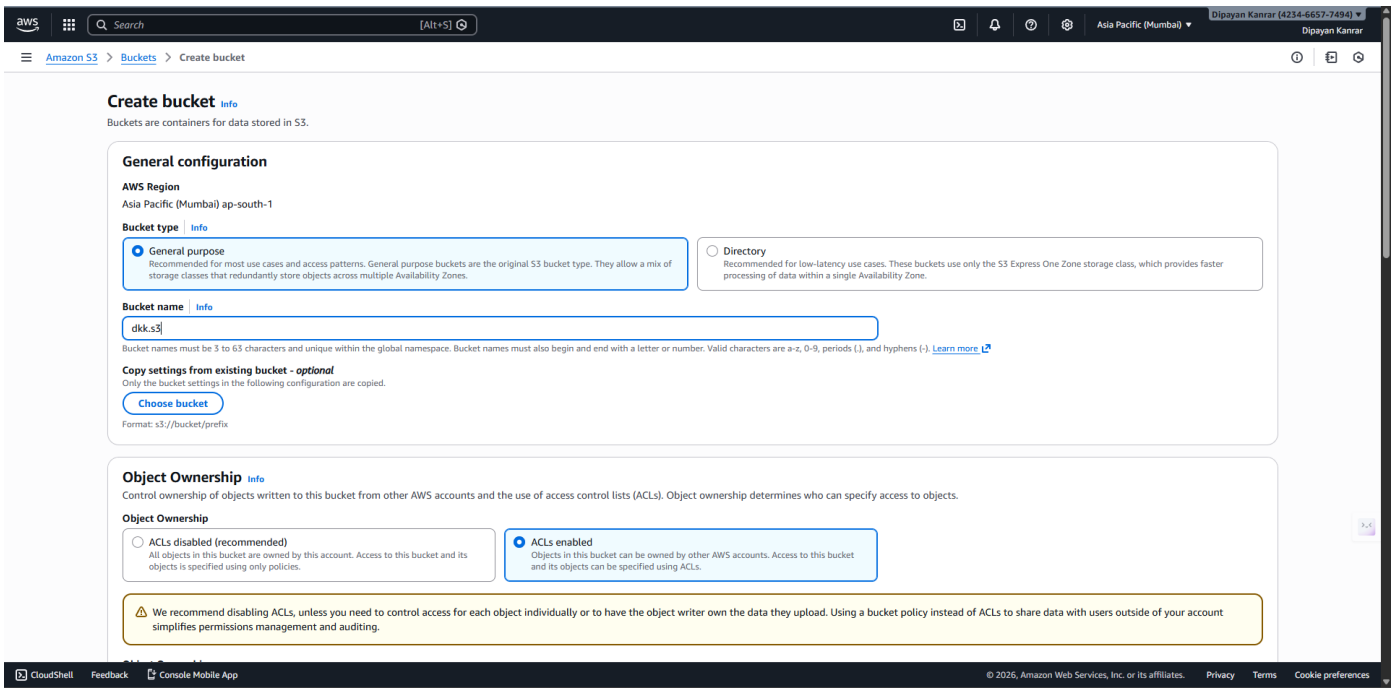
❖ Upload a static website on S3

This Steps are as follows:-

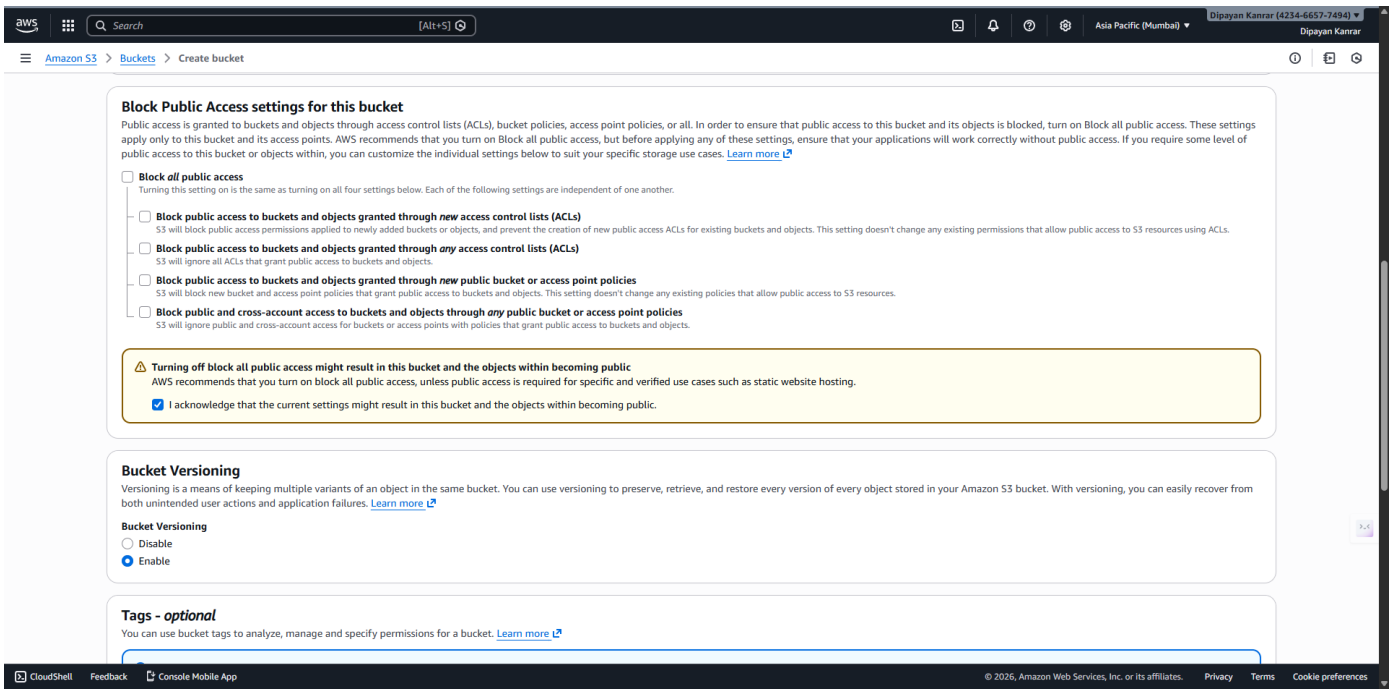
1.open the **AWS CONSOLE** , go to **S3** , and click for **create bucket**



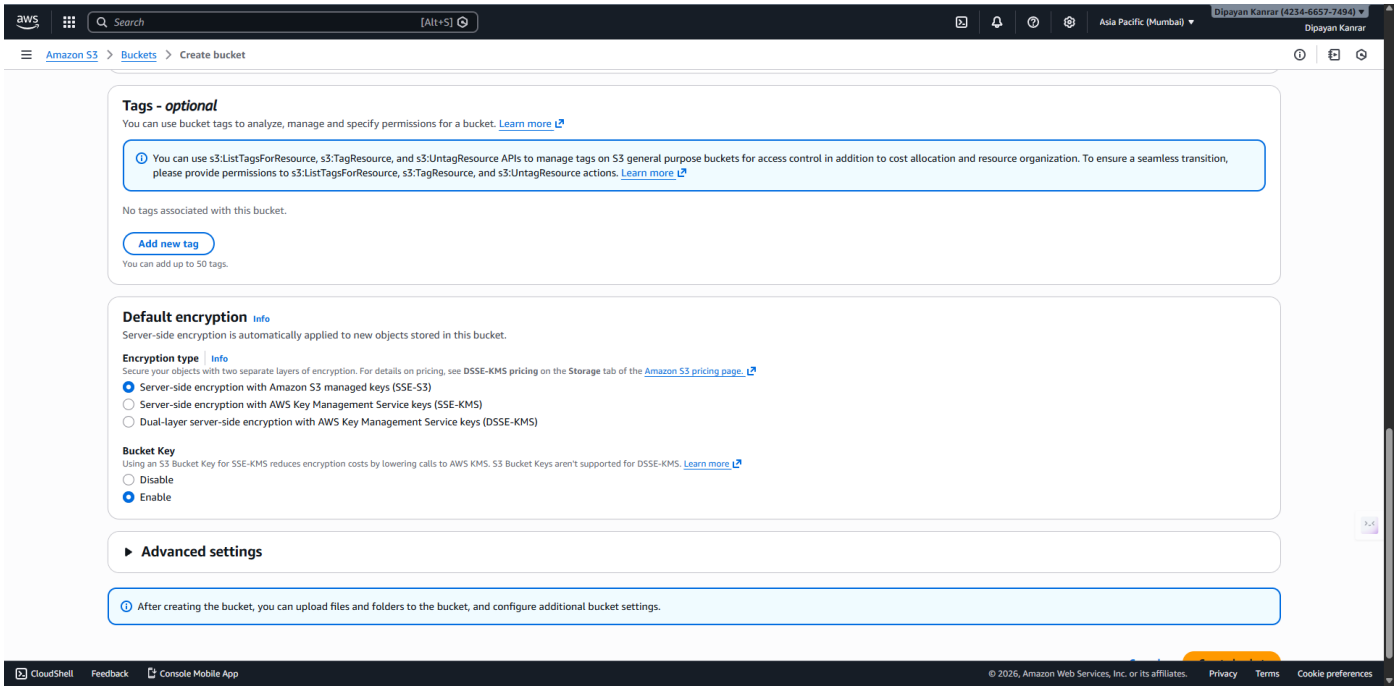
2. The subsequent window appears. Provide a name for bucket, choose ACLs enable,as we have to create public bucket



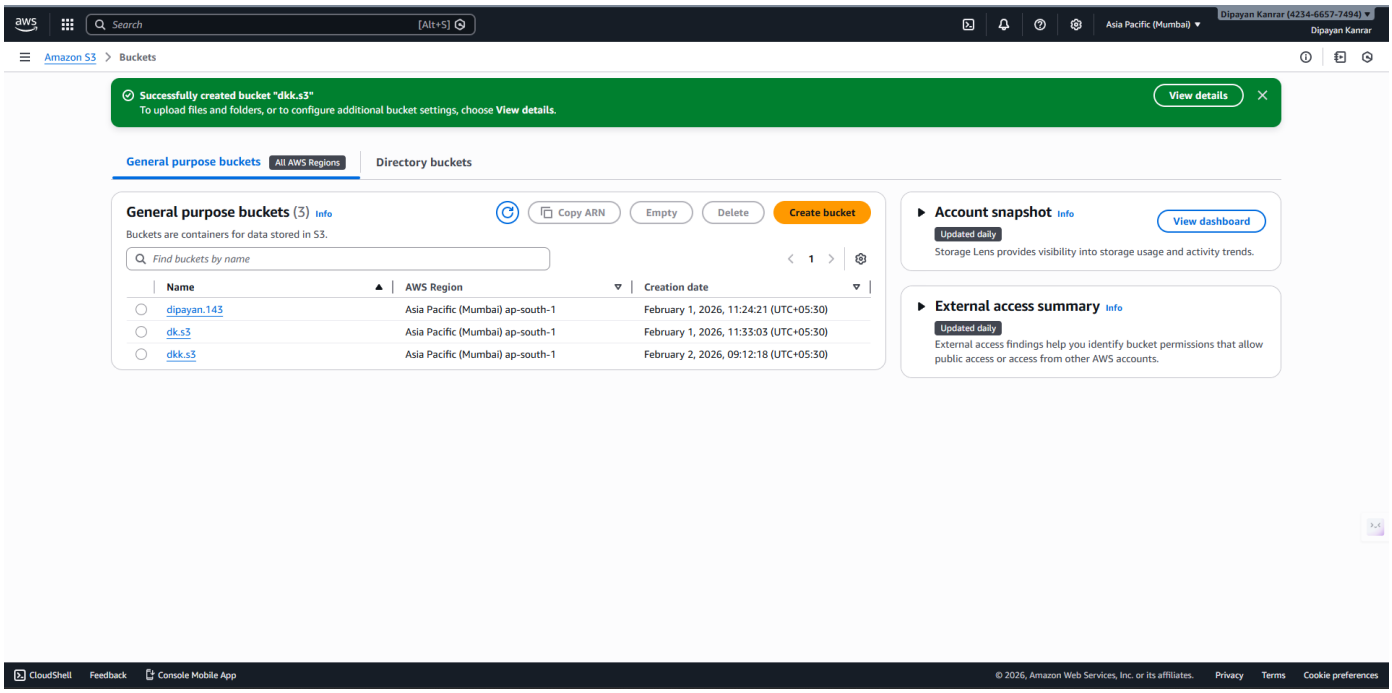
3. De-select the **Block all public access** option,and acknowledge it,choose bucket versioning enable



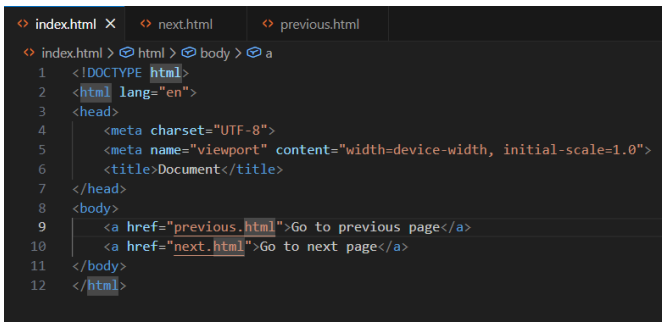
4.Rest of them keep as it is, and click create bucket option

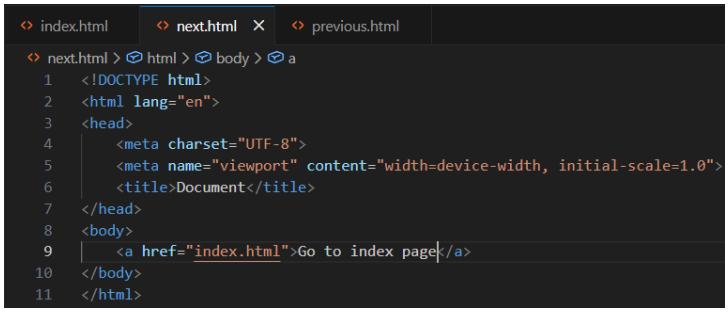


5. A public bucket has created, named **dkk.s3**

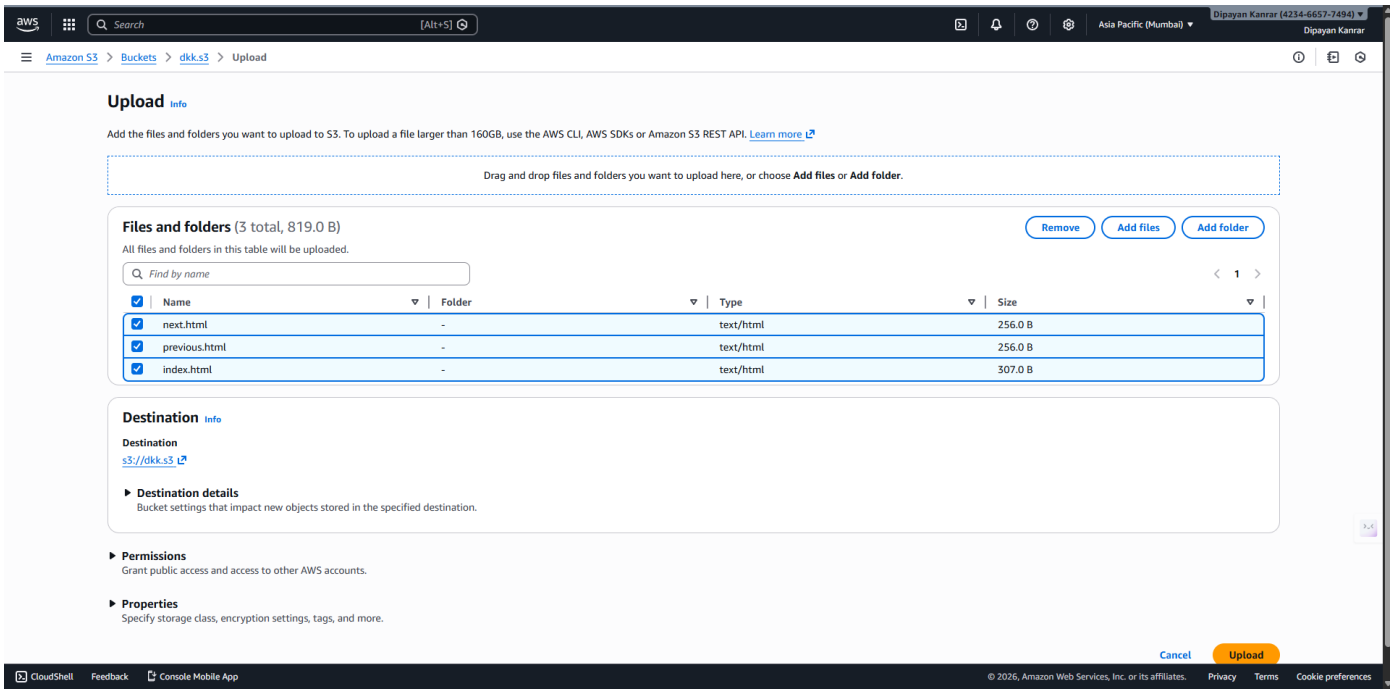


6.we have to create three html page, whose name will be index.html, next.html and previous.html

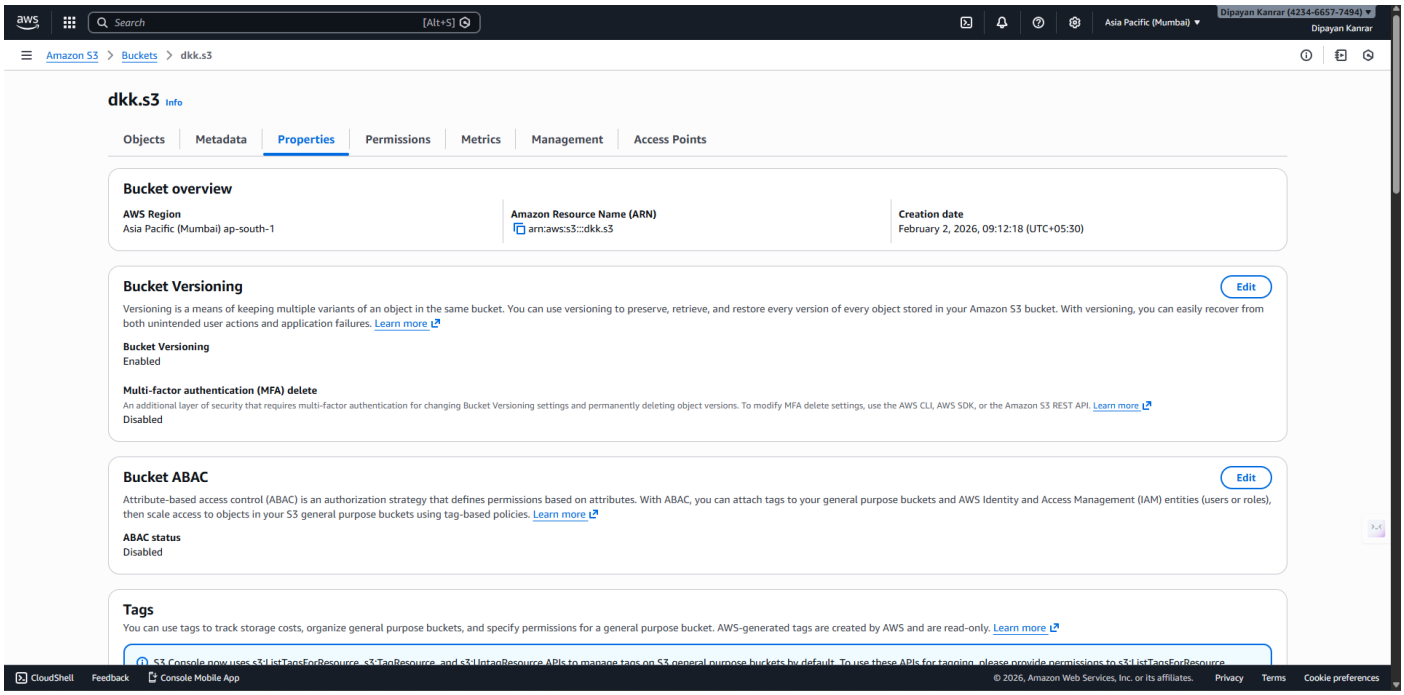




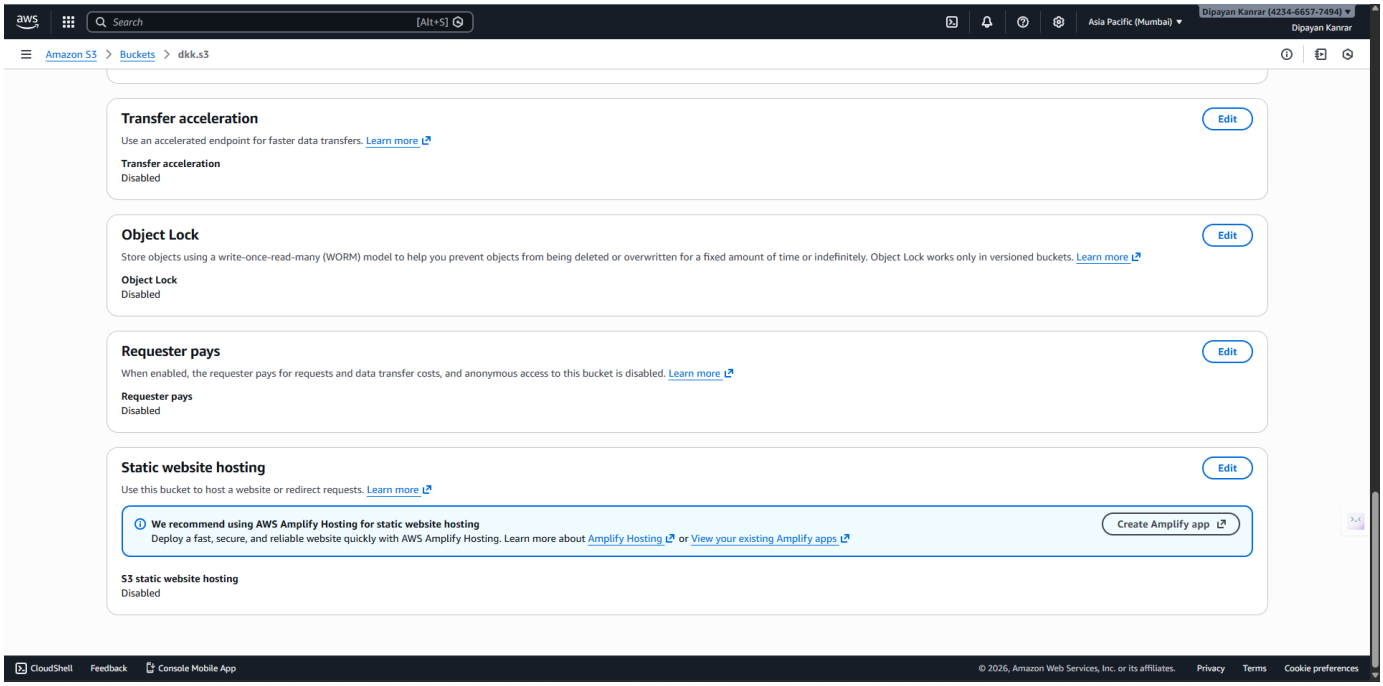
7.Click on bucket **dkk.s3,** click on add file option and upload these three webpages (Index.html, next.html, previous.html), select all these files and click on **upload** option below.



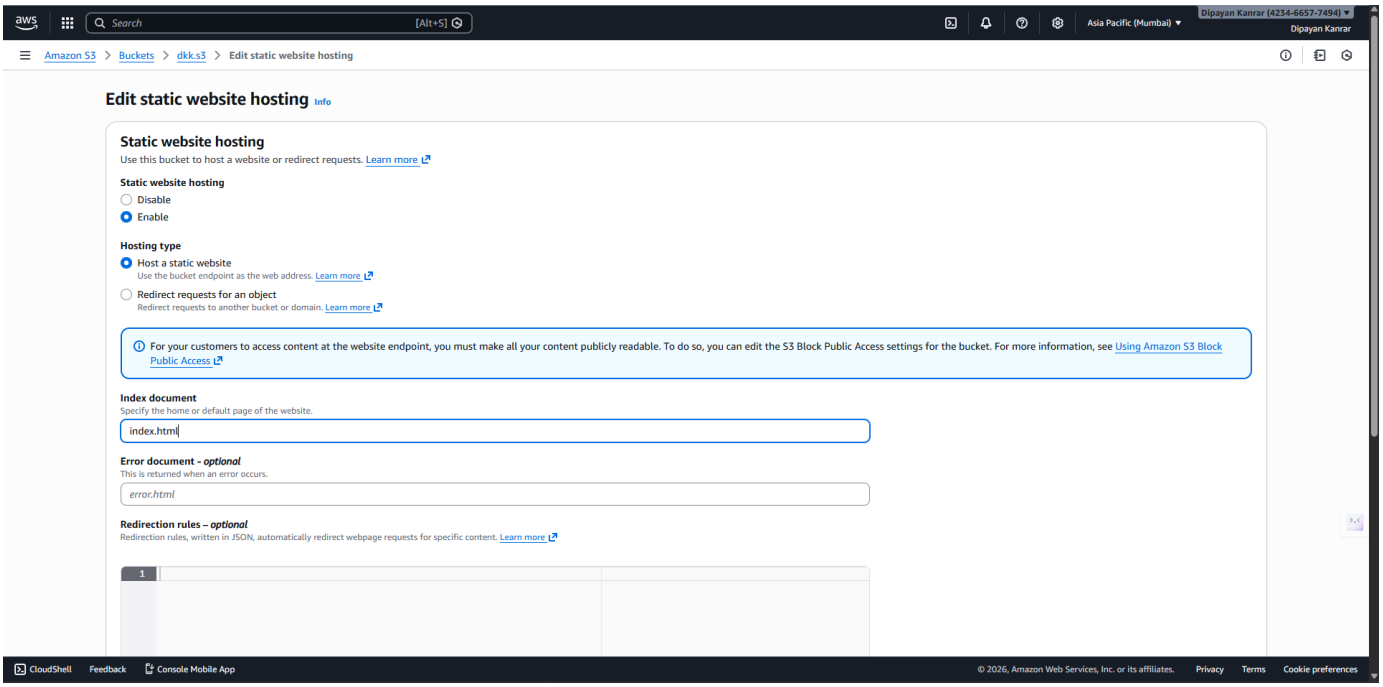
8.Go to bucket and click on **properties**.



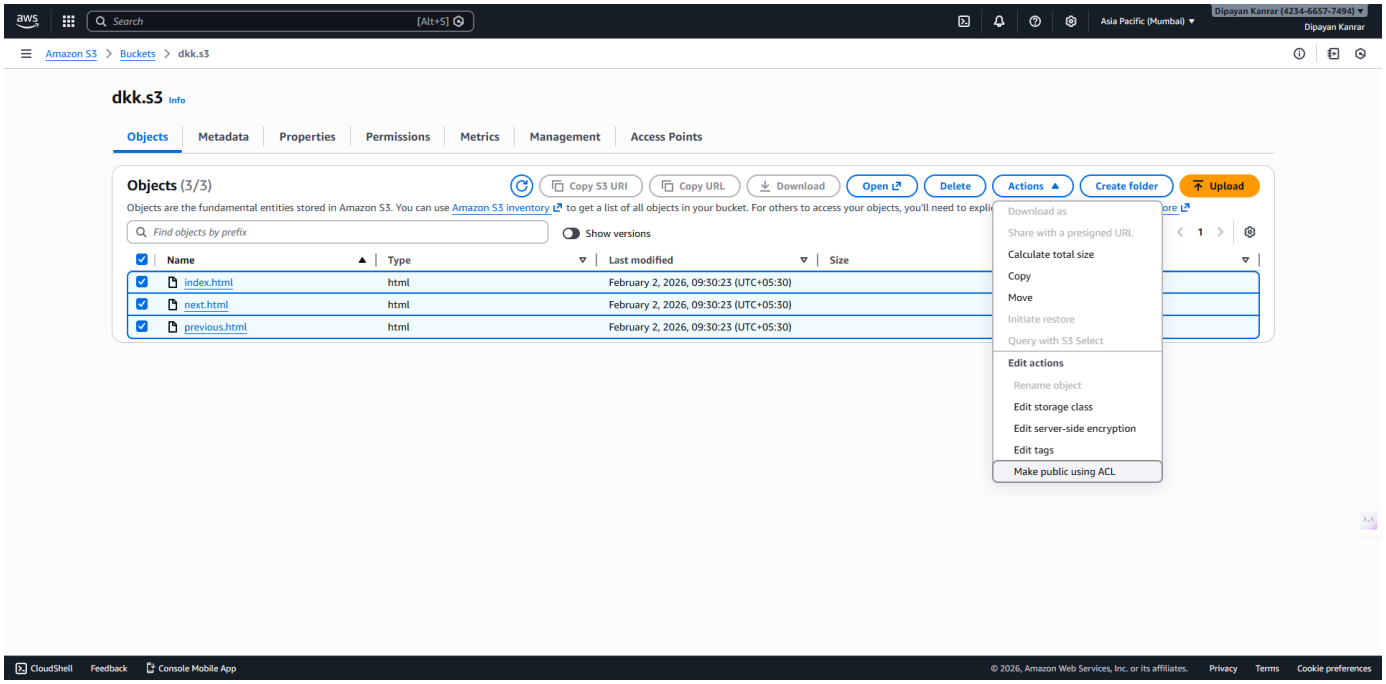
9. After scroll you can find option **Static website hosting** on below**.** Click on **Edit** option



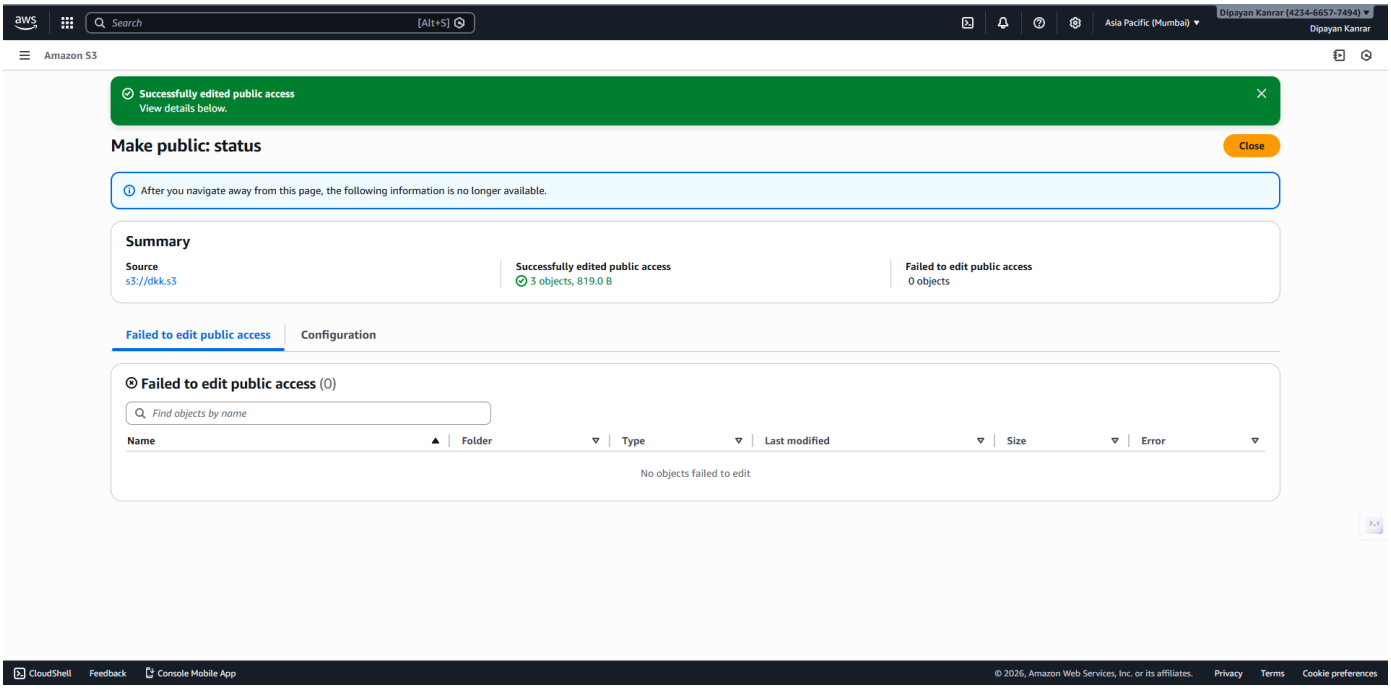
10.Enable the static website hosting, write index.html on index document and click on save changes.



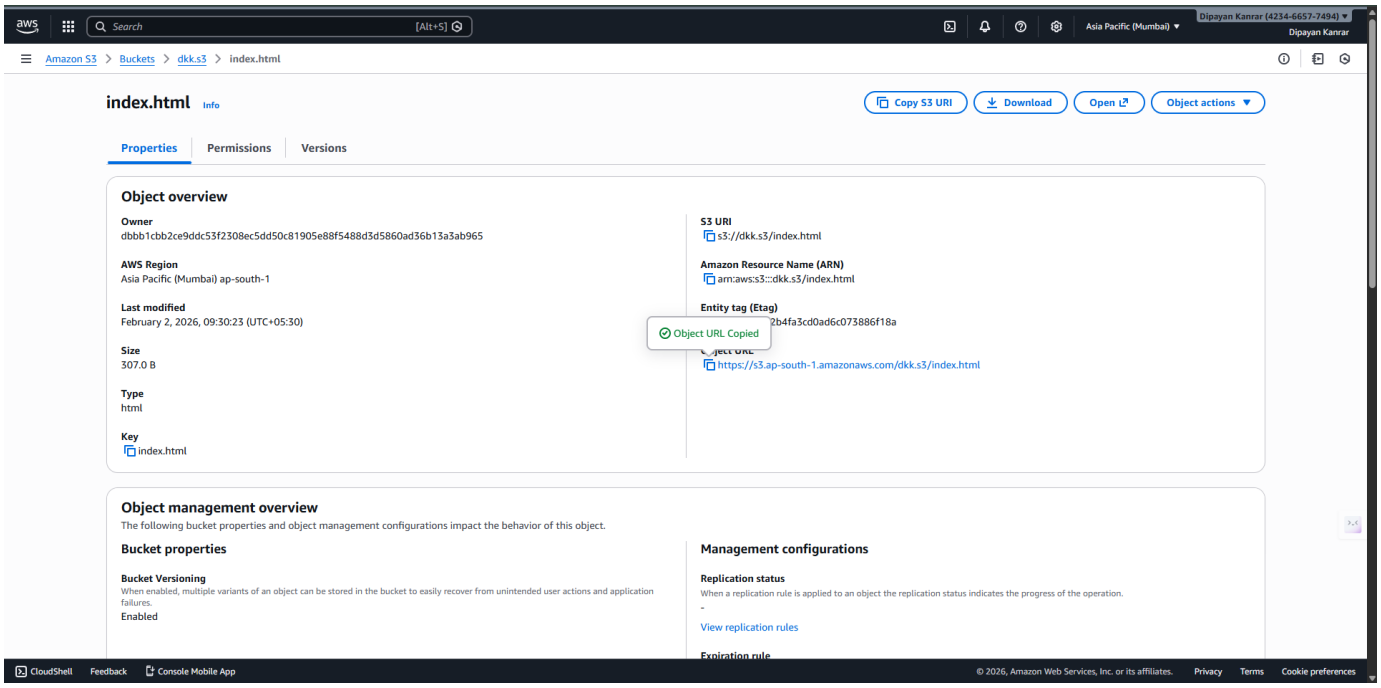
11.Go back to Objects of bucket,select all the existing file (all three web pages), click on action and then click on make public using ACL



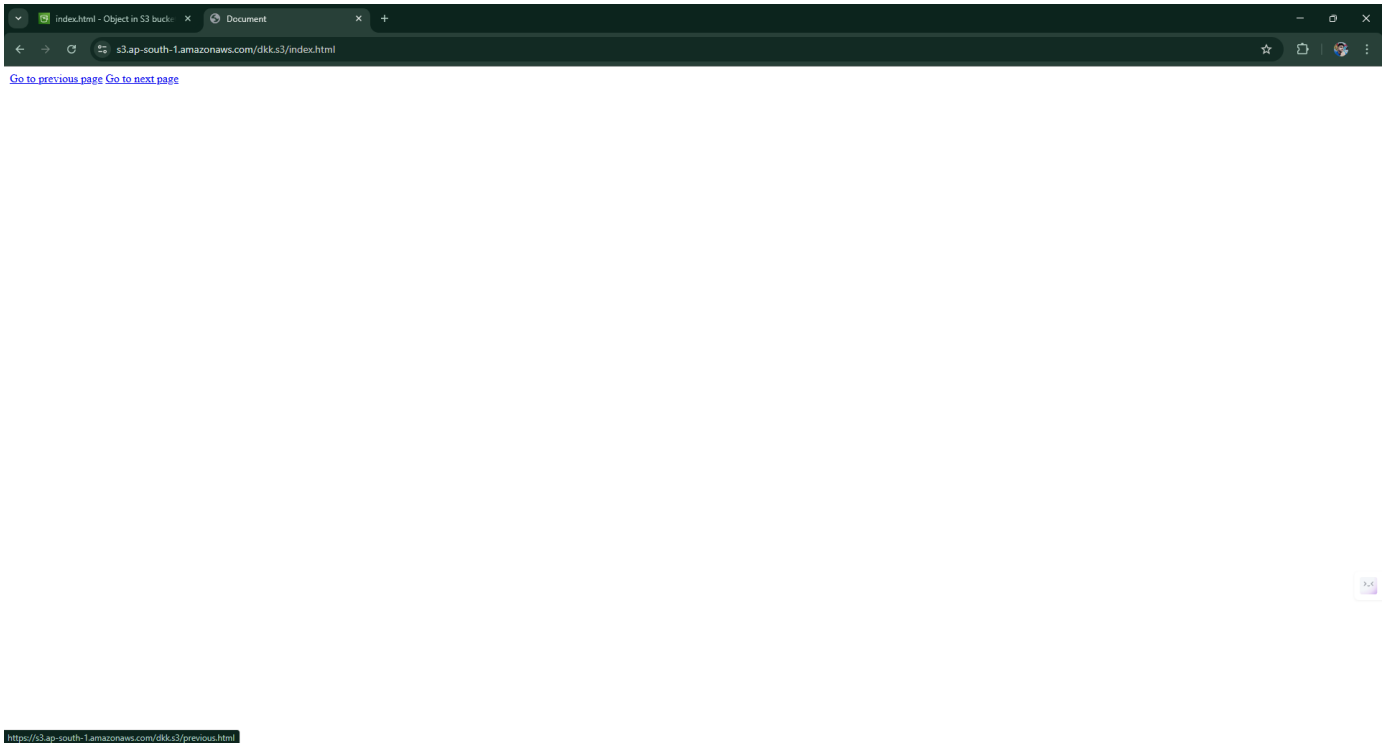
12. after that click Successfully edited public access, ensuring with green pop-up bar.



13.click the **Index.html** file from bucket and the properties will be open then copy the object url.



14.Paste this url to new browser window, and the webpage index.html will be open , and you can go to next or previous page through this index page



index.html - Object in S3 bucke

Document

s3.ap-south-1.amazonaws.com/dkk.s3/next.html

Go to index page
